IC Pouring Cups

ICP Ceramic pour cups are an essential component used in the manufacture of quality investment castings.

The pour cup is usually mounted to the wax downsprue and becomes part of the ceramic shell offering the advantages of mold stability, strong target area for metal impact and less potential for inclusions due to shell breakage. The cups are made from proprietary mullite or fused silica composition designed to be compatible with investment mold materials.

ICP manufactures over 50 different size pour cups.
