

Duck Feet Ingates

ICP Duck Feet are used as casting ingates. These are designed to reduce erosion on the surfaces of cores and molds by allowing the metal to feed into the mold calmly and reduce turbulence in the mold.

Another feature is when these ingates are removed (knock off), the casting finish is better at the ingates due to sharp edges from the ICP Duck Feet.

Available in both mullite and fused silica.

Samples are available for testing.

Product Benefits

- Erosion reduction
- Better casting finishes
- Fewer inclusions
- Less gate grinding
