

COVER PLATES

Industrial Ceramic Products (ICP) ceramic cover plates are designed to protect the investment mold inlet during the preheat process, helping to prevent contamination. These durable products resist thermal shock at high temperatures and are compatible with both pour cups and shell materials. Vented cover plates are specifically engineered to stand off the pour cup, allowing gases to safely vent from the mold inlet during preheating.

The ICP Advantage

- Made in the USA
- ISO Certified
- Premium Materials
- Lighter Weight Technologies
- Custom Options
- Fast Delivery Times
- New Technologies

Benefits of the products

- Help maintain temperature control
- Help maintain mold integrity
- Available in both vented and unvented styles

Applications of the products

- Used to cover investment molds during pre-heat
